DESCRIPTION

3' TUF RIB

The Tuf Rib have full 36" coverage, with 3/4" high standing ribs 9" on center. The Tuf Rib has 3 stiffeners, two between each standing rib and one on top of the rib, making it a little stronger. Standard within the roofing industry for almost all residential, commercial and agricultural applications.

2' DELTA RIB - (28 GAUGE)

This 24" coverage panel has 3/4" high standing ribs, 8" on center, with one stiffener between the standing ribs

2' - 2-1/2" CORRUGATED - (28 GAUGE)

This NEW retro-style panel will replicate the look of corrugated roofs from the past - in 13 colors and Galvanized! Great for interiors too!

3' - 1-1/4" STUD PANEL - (26 GAUGE)

This panel is designed to span a longer unsupported area of roof footage, requiring less framing and supporting a larger snow load. Well-designed for the lower-pitched roof, this panel is intended for use on large commercial or agricultural structures. Our Stud Panel is available in 5 colors and Galvanized.

3' - 7/8" CORRUGATED - (22 GAUGE)

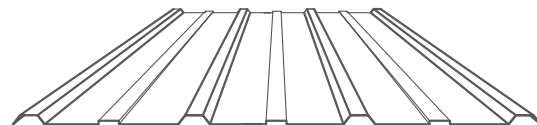

Weathering steel is available in Core Ten or Cold Roll Steel. Core Ten is made of 22 gauge steel with added alloys of copper, chromium and nickel, allowing this roof a life span of approximately 80 years. Cold Roll, produced without the additional alloys, will have a lifespan of approximately 50 years. Weathering steel develops a wonderful rusty patina as it is exposed to the seasons.
